

Carbon Pollution – Carbon Capture – Reduce Carbon +/-70% TODAY - ECO Fuel Systems – ECOFuelMax

The US Government is drastically working to reduce Carbon Pollution promoting a very expensive method that may take years to implement. A low cost proven alternative is the ECOFuelMax Pollution Solution, it should be implemented immediately to reduce Carbon Pollution +/-70%.

By: [ECO Fuel Systems, LLC](#)

RICHMOND, Va. - Dec. 28, 2023 - PRLog – Commercial vehicles are a cause for +/-70% of Carbon Pollution. Trucking Companies and Municipalities have been advised to implement Carbon Capture.

Carbon Capture is not Free. In simple terms CSS involves the capture of Carbon Dioxide (CO²) from emissions like the burning of fossil fuels. Captured Carbon is then transported from where it was produced, via a ship or in a pipeline and is stored deep underground in geological formations. The big question, what damage or price will have to be paid? Will it affect the Geological foundation of Planet Earth?

Risks include leakage, groundwater contamination, pipeline incidents and health risks to the Public. Studies show that Carbon Capture System may only reduce net emissions by 10 to 11 percent, not the estimated 80 to 90 percent cited by proponents.

There is a basic proven solution that is low in cost and guaranteed to work, used by the [US Government](#), why has it been ignored?

The cost to implement ALL vehicles in the United States is far less

than the current administrations planned expenditures of Billions or Trillions of Dollars. Every fossil fuel burning vehicle based on Government Granted Reports for the ECO Fuel System has shown a Carbon Pollution/Greenhouse Gas reduction of 40% to 70%. Based in the field reports and facts the ROI on a Transport Truck is less than 20 days. The reduction of Carbon Pollutants and Diesel Regeneration Cycles is +/-70%, Fuel reduction can be +/-10%.

This is an immediate reduction that has a cost of +/- \$300 per automobile to +/- \$900 for a large Diesel Transport Truck, it can last 20+ years. This system has been tested (10+ years) and has shown to work on all fuels, even large Transport Trains.

Based on the Scientific Principle of Electrolysis/Electrostatic Energy all fuels burn cleaner and more combustible. No Chemicals or Maintenance is required. The Public and Commercial Trucking have an opportunity to reduce Fuel Consumption, go Online see [Reviews and References](#).

The ECOFUELMAX (aka ECO Fuel System) is a Guaranteed No Risk solution to reducing Maintenance Expenses, Downtime and reducing Fuel Consumption (+/-10%). For +/- 20 years the ECO Fuel System principals have been working to help Government, Commercial Trucking and the Public reduce Pollution, Fuel Consumption and help increase Sustainability. Test results are online, if anyone, Commercial or Individuals is interested in immediately reducing Pollution, Saving on Fuel or wants to do a Test, go [Online](#) or call and speak with a human.

Hapy Holiday's and a Healthy New Year! Go GREEN Burn Clean!
