

2021 Infrastructure Passes - Gas Tax hike True or False - How to Increase MPG – ECOFuelMax

Looks like the Federal Government is going to raise the Fuel Tax after 29 years from 18.4 to 32+ cents per gallon. Today many save +/-10% using the ECOFuelMax solution.

By: [ECO Fuel Systems, LLC](#)

BOCA RATON, Fla. - Aug. 10, 2021 - PRLog -- Get ready; the approved bi-partisan infrastructure plan may increase fuel taxation at least 16 cents per gallon in the near future. Unfortunately the USA is no longer fuel independent and now buys fuel from other countries. After closing pipelines and many US fuel production facilities, fuel prices have risen over 40% (\$1.00+/gal.) in one year.

To motivate citizens to purchase Electric Vehicles the Federal Government gives a Tax Credit up to \$7,500. Those who purchase used EV's can get up to \$250 (WOW!). If there was a proven legitimate product that could help reduce Carbon Pollution 40% to over 70% shouldn't the US Government motivate or assist those working to reduce Pollution?

As an environmental educator I understand the immediate need to act. I work daily to help the rich, poor, municipalities and companies reduce fuel costs and maintenance expenses by sharing solutions to reducing Pollution.

It makes sense if you reduce Carbon Pollution, NO_x and Greenhouse Gases fuel burns more efficiently and cleaner. A more combustible and cleaner fuel can reduce maintenance, increase sustainability and add power while operating more fuel efficient, all for a few hundred dollars.

Fraudulent and "Snake Oil" companies have come and gone, the ECO is still here, BBB A+ rating. Today technologies and science can help reduce Pollution. Municipalities and Companies waste multi millions of dollars in operating expenses while unclean burning motors omit millions of tons of Carbon Pollution/Particulates, NO_x and Greenhouse Gases daily. Scientists this week reported that global warming is occurring faster than originally forecasted. We need to act before it is too late!

Many have read about then tested, and are now successfully using the ECO Fuel System. In Texas for over 15 years 200 Independent School Districts 30,000+ Buses use it. Thousands of Trucks, Transit, Heavy Equipment, Marine and Automobiles along with US Border Patrol/Homeland Security and NASA all depend on the ECO Fuel System daily. The ECOFuelMax solution only costs a few hundred dollars. ROI on a diesel Truck is +/-20 days, it can last 20+ years.

Until such time Electric Vehicles are feasible, everyone needs to help reduce Carbon Pollution and increase fuel efficiency. The ECOFuelMax pollution solution is easy to install and will not affect any warranties, it only treats fuel. Every individual, company and municipality should test the proven scientific facts and work to reduce Carbon Pollution/Particulates 40% to over 70% today, while saving fuel.
