

## Politicians and Transportation Managers take notice Reduce Fuel Consumption and Pollution - ECO

After emails and communications to President Biden, Senators, and State Governors like Ron DeSantis and many other Politicians it appears no politicians desire to address reducing Hydrocarbons or helping reduce the public's fuel consumption.

By: [ECO Fuel Systems, LLC](#)

**DAYTONA BEACH, Fla. - April 20, 2022 - PRL**og – Most in power ignore Certified Government Grant reports that identify proven scientific principles of Electrolysis, Fuel burns more combustible and cleaner. The ECOFuelMax Pollution Solution can reduce Carbon Pollution +/- 70% while reducing Fuel Consumption (+/-10%) TODAY!

Today's focus is on electric automobiles. Fact: Trucking and Transportation Diesel vehicles produce 70%+ of the Carbon Pollution/Particulates released into the atmosphere daily, not cars. Electric powered trucks have stringent limits. They are unable to transport heavy loads 25,000 to 80,000 pounds. The travel distance for a smaller electric vehicle is +/- 400 miles.

**The Time to Take Action is NOW!**

**SAVE Fuel!**

**Reduce GreenHouse Gases!**

**Reduce Carbon Pollution!**

**Increase POWER!**

**SAVE Money!**

**(866) 374-0002**

2022 and then again in 2024 are election years. Are politicians focusing on inflation helping consumers and reducing Pollution? Based on the actions of the Federal politicians fossil fuel is to be eliminated. Will the elimination or reduction of the cleanest fuel in the world produced in the USA help or hurt our economy? Will leaders buy oil from Russian, Venezuela or Iran?

In today's world Fuel is the basis of our economy. Toys, Food, Clothing, and Medical Supplies to name a few are delivered via Diesel Trucks. The 100%+ increase in fuel prices has led us to a level of inflation we have never seen before.

Political leaders and Transportation leaders are all aware of solutions and opportunities, why won't our Political Leaders, Independent Companies and the Public take action?

One GUARANTEED opportunity I have been sharing for years is the ECO Fuel System. Cities, Municipalities, Companies and the Public who use it, all claim success. Recently a private automobile owner put one on a 3.3 Twin Turbo gasoline vehicle that required premium fuel. Today she uses regular fuel and has increased her MPG 8% with increased power. What more can our Government, Transportation leaders and the Public desire than Reduced Fuel consumption with the reduction of Carbon Pollution?

The Public follows our leaders who may be guiding us in the wrong direction. Wake up! Why wait until 2030 to reduce Carbon Pollution 50% when we can do it today on existing vehicles. The ECO Fuel System is a proven solution with a 90 day money back Guarantee, BBB A+ Rated.

Tens of thousands of School Buses, Transit Buses, Trucks, Heavy Equipment and Automobiles have been successfully using the ECOFuelMax for over 10 years. Who isn't in favor of saving 5%+ on diesel and +/-10% on gasoline expenses? Diesels can reduce their REGEN Cycles and downtime +/-70% saving on maintenance expenses (DPF) and downtime by burning a cleaner fuel.
