Spend Tax Dollars Wisely! Pollution or Political Paybacks? - ECOFuelMax

In a Bipartisan action our leaders just allocated \$1.2 TRILLION Dollars towards infrastructure. People ask where is the money going?

By: [ECO Fuel Systems, LLC](#)

TALLAHASSEE, Fla. - Nov. 18, 2021 - PRLog -- CNBC claims +/- 10% or 110 Billion will be used for physical infrastructure like roads. Passenger Freight gets \$66 Billion, Public Transit \$39 Billion, Airports \$25 Billion, Ports \$17 Billion, Road Safety \$11 Billion, Electric Grid \$108 Billion, Electric Vehicle Charging Stations \$7.5 Billion, Clean Energy Buses and Ferries \$7.5 Billion, Broadband for the less fortunate \$65 Billion, Clean Drinking Water \$55 Billion. A total of \$511 Billion Dollars.

\$256 Billion towards Utilities and Environment funding. That's a total of +/- \$767 Billion dollars. Forbes states the remaining funds may be used for previously allocated projects.

Americans are confused about non infrastructure projects being included. Our Roads, Bridges and older building infrastructure's need to be addressed in their entirety immediately, will the allocated \$110 Billion dollars funds be adequate?

Rebuilding or repairing one bridge in South Florida cost the State \$97 Million dollars in 2020. There are hundreds if not a thousand more bridges and highways that need repairing or replaced across the USA.

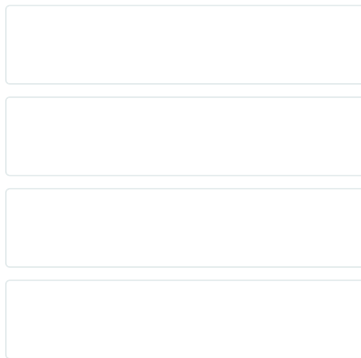

Do our political leaders know how to manage our funds? They refuse to reduce Carbon Pollution Today for the sake of forcing Electric Vehicles on citizens tomorrow. As everyone is aware fuel prices have risen +/-60% and everything from milk to eggs has risen +/-50%.

Petroleum products like Gasoline, Diesel and Heating oil/gas has dramatically risen and will place a major impact on a majority of families this winter. How much of the Infrastructure Bill money will be used to help homeowners pay for high priced energy?

As a pollution educator who has been watching our leaders refuse to make logical choices to help our citizens upsets me. The Conservative Climate Caucus like other political committees across the country continues to have meetings and do research. They have either failed or refuse to address current proven pollution reducing solutions that are available.

Transit, School Districts (200+) and Trucking for over 10 years that have used the ECO and have been saving millions of dollars in fuel and maintenance expenses while reducing millions of tons of Carbon Pollution. All who use the ECOFuelMax Pollution Solution report a substantial savings. No Chemicals, No Maintenance. It works by increasing the Reid Vapor Pressure utilizing Electrolysis, increasing a fuel combustibility causing it to burn cleaner and more efficiently.

Our President wants to reduce Carbon Emissions 50% by 2030. Why won't our leaders do it today for a few hundred dollars? The ECO Fuel System via Certified reports shows it can meet or exceed their goals of 50%, no need to replace an entire vehicle.
